

MIRACLE

Mid-InfRAred Camera without LEns

- Mid-IR Imaging Camera & low-res. spectroscopic capability
 - Wide-Field with high spatial resolution via Silicon BIB detector array (Si:As 2Kx2K, Si:Sb1Kx1K, Si:X 128x128)
 - Reflective optics : broad-band, high efficiency, low probability of ghost
 - Observing Efficiency: superior than JWST
- Continuous coverage at 5-38 μ m by 2 channels (MIRACLE-S : 5-26 μ m, MIRACLE-L : 20-38 μ m)
 - E.g. Star-formation activity upto z=4 by using PAH features at 8 μ m
- FoV: 5'x5' Imaging, 5' long slit for spectroscopy
 - FoVs of MIRACLE-S & -L are separated
 - Cluster of Galaxies / entire nearby galaxy in a Single Shot
- $\lambda/\Delta\lambda=5$ (Imaging) 200(Spec.)
 - Useful for PAH, Graphite, H₂O ice
- Angular resolution: diffraction limited (0.35" @5 μ m)

MIRACLE on IOB

MIRHES

Mid-IR High-resolution Echelle Spectrograph

Overview Compact high-dispersion spectrograph with Imersion Grating consisting of Short-mode (S-mode)、Long-mode (L-mode)

Specifications

	S-mode	L-mode
Wavelength	4–8 μm	12–18 μm
($R = \lambda/\Delta\lambda$)	~30,000	~30,000
Slit width	0.72"	1.20"
Slit length	3.5"	6.0"
Dispersion element	ZnSe Imersion Grating	CdTe Imersion Grating
Detector array	2k x 2k Si:As (25 $\mu\text{m}/\text{pix}$)	2k x 2k Si:As (25 $\mu\text{m}/\text{pix}$)
pixel scale	0.29"/pix	0.48"/pix

Optics

Sensitivity * 600s exposure, RN=10e-, Dark 0.1e-/s, Zodi background(high/low)

- Japanese-led (U. Tokyo/IoA, Kyoto-Sngyo Univ./ISAS)
- High-blaze Echelle grating is also under consideration for L-mode

MIRMES

Mid-IR Medium-resolution Echelle Spectrograph

Simultaneous IFU using both Arm-S & Arm-L (Image slicer)

	ARM-S	ARM-L
array format	Si:As (2k x 2k :25 $\mu\text{m}/\text{pix}$)	Si:Sb (1k x 1k:18 $\mu\text{m}/\text{pix}$)
Wavelength coverage	10.0 μm -20.0 μm	19.5 μm -36.1 μm
Spectral resolution ($R=\lambda/\Delta\lambda$)	~1490@13 μm	~680@27.8 μm
pixel scale	0.403 ("/pix)	0.485 ("/pix)
Slit width	1".2 x 5 slice	2".5 x 5 slice
FOV size	12" x 6".0	12" x 12".5

Arm-S			Arm-L		
Echelle order	λ_{\min} (μm)	λ_{\max} (μm)	Echelle order	λ_{\min} (μm)	λ_{\max} (μm)
4	15.53	19.97	5	29.5	36.1
5	12.71	15.53	6	25.0	29.5
6	10.75	12.71	7	21.7	25.0
7	(9.98)	10.75	8	19.5	21.7

※ λ_{\min} and λ_{\max} are defined as the wavelength at which the grating efficiency drops to 40% of the peak

SPICA coronagraph instrument (SCI)

Wavelength (λ)	Long channel $5 < \lambda < 27 \mu\text{m}$ Short channel $\sim 1 < \lambda < 5 \mu\text{m}$ (coronagraph mode at $\lambda > 3.5 \mu\text{m}$)
Coronagraph method	Binary pupil mask
Observation Mode	Coronagraph Imaging/spectroscopy or Non-coronagraph Imaging/spectroscopy (simultaneous use of Short/long channels)
Contrast	6 th order of magnitude
Spectral Resolution	~ 20 , ~ 200 in spectroscopy mode
Filter bands in imaging mode	Band-pass filters at both Short, long channels
Inner working angle	$3.3 \lambda/D$
Detector array	Si:As (long channel), InSb (short channel)
FoV	$1' \times 1'$

- High-dynamic range coronagraph in the mid-IR
- Key Observing programs
 - Jupiter-like exoplanets
 - Monitoring of planet transit

- Simultaneous use of short/long
 - Optimization of pixel size
 - covers the whole SED of exoplanets
- Wavefront control via deformable mirrors
- High-accuracy attitude control
 - C-TTM (tip-tilt mirrors), C-FPC (Guide sensor)

FPC (Focal Plane Camera)

Proposed Korean Contribution of one of Focal Plane Instrument, consisting two cameras:

- FPC-G** Focal Plane Guide Camera, a part of AOCS for high-accuracy attitude control
Pointing Stability $0.036 \text{ arcsec} (3\sigma) @ 0.5 \text{ Hz}$, Control Accuracy: $0.02 \text{ arcsec} (0\text{-}P)$
- FPC-S** Near-IR ($0.8 - 5 \mu\text{m}$) imaging & spectrometer for Astronomical purposes
Wide-field & high throughput compared with JWST
Back-up system for FPC-G

KASI (Korean Astronomy and Space Science Institute) will lead the development, assembly & test

	FPC-G	FPC-S
Optics	refractive	optics with lens
Detector array	1K x 1K InSb	
Field-of-View	5 arcmin	
Pixel Scale	0.3 arcsec	
Read-out Speed	2 sec	100 -- 600 sec
Wavelength range	I band ($0.8 \mu\text{m}$)	$0.8 - 5 \mu\text{m}$
Wavelength Resolution	R=5	R= 5 – 50
Sensitivity	single channel 21.5 mag (AB), 5σ	5 wide band filters + 3 LVF 26.3 mag (AB), 100 sec, R=5
Operating Temperature	Structure 4.5 K, Detector at 10 K	
Heat dissp. at 4.5K stage	< 1 mW	< 1 mW
Cold Mass	~ 5 Kg	~7Kg
